

MET Press Release

Medical Device Design Specialties From MET

Medical device design and development services at MET encompass a wide range of specialties. We have particular expertise in cardiac and cardio-vascular products. We also have laparoscopic products, from our design studio, on the market and number of surgical instruments. All designed for novel procedures.

We have engineers with training from both academic and industrial backgrounds. Their industrial experience includes working closely with clinical staff particularly in cardiology, anaesthetics and emergency medicine. Engineering skills combine with computer modeling and rapid prototyping, Finite Element Analysis (FEA) combines with bench testing resulting in proven design ergonomics and function.

We can also draw on the input of clinical experts and our regulatory consultants give a comprehensive project management service from the very first idea to the production ready product.
