

MET News – June 2011

Excellence in Medical Device Testing

Talk to Our Experts

Do you need advice on supporting information for your technical files? MET's web site now features a communication channel to allow you to converse with our experts. We can help with: biocompatibility testing, functional testing, packaging validation, stability studies and much more. Simply sign in to our chat area and we will help as much as we can.

What Devices Can MET Test?

At MET we have good understanding of a wide variety of drug delivery devices, medical devices of all classes and of production validation. In another development on our web site we have listed just some of the standards we have experience with. This allows customers see the breadth of our experience. [More information is available here.](#)

No Queues At MET

Project managers and engineers are always working to tight deadlines. We understand this and endeavour to make our processes as efficient as possible. When work is loaded at MET a Sample Receipt Acknowledgment is returned to the client. This details the samples we have, what we intend to do with them and when we will process them. This document and interim reports keep you informed of testing progress. To ensure that this progress is as swift a possible we have a 'no queues for customers' policy at MET. For example, we recently identified a potential bottle neck in our ageing chambers. Because of this we have now purchased four further accelerated ageing chambers to allow us to continue to offer a variety of ageing temperatures with no hold ups.

X Ray Inspection Web Page Now Live

This equipment is an excellent, non-destructive method of inspecting inaccessible areas inside products and packages. It is ideal for medical device QA, pharmaceutical package inspection and for analysis of drug delivery device components. [Click here to see more detail.](#)
