

Packaging and QA Equipment

Pouch Making Machines

The JR Maruani range of 4-sided pouch making machines offers robust reliable clean room packaging, from the economical intermittent-motion VIVAPAC running at 25 packs/minute, to the high-speed continuous-motion RDM 2000. These machines are operating everyday in clean rooms around the world.

Blister Sealing Machines

As robust as they come! The Belco Medical Tray Sealer delivers perfect seals every time. Engineered to deliver consistent temperature and pressure throughout the sealing cycle right across the sealing platen, these machines can be totally relied upon.

Blister Forming and Sealing Machines

Economically produce your own blisters and deliver top quality production. No need to store a variety of blister sizes, no need to worry about supplier lead times. These machines work form flat sheet material and work extremely well.

Pouch Bar Sealers

Our choice of bar sealers includes inexpensive impulse sealers and more easily validated constant heat bar sealers. The Belco Medical Pouch Sealer continuously monitors and displays the bar temperature across 5 thermocouples.

Tensile and Peel Test Equipment

The easy to use Mark-10 tensile and compression gauges and test stands are perfect a wide variety of tests. Tests include product strength tests, cap twist off tests and seal peel tests for packaging. As robust and reliable as they are accurate.

Seal Strength Test Equipment

The MET Mark V MiniBurst is simplicity itself. Just push two needles into your package press the button and in 10 seconds you will know whether your pack seal strengths are within quality limits.

Leak and Integrity Test Equipment

Non destructive QA for impermeable packs with pressure decay and inert gas detectors. Ranging from audit stations to automatic in-line machines we supply fully calibrated and maintained equipment to suit your requirements.
