

SISAF Testimonial

We have been using MET's pilot production facility for 6 months. All the staff at MET have been exceptionally flexible and helpful. We went from initial enquiry to full production in two weeks, then ramped processing up and down at short notice with full co-operation. MET also helped improve processes and quality, and even suggested cost savings. It would be difficult to improve on this service, but MET managed it by providing, an equally responsive and complete analytical chemistry facility in the same building. This enabled us to verify what we were making, develop process improvements, check for contaminants and residuals, and carry out stability studies with ease and grace. Exemplary service, thank you MET you met all our deadlines and demands!

With best regards,

Chris
