

Medical Device Design and Development Services

When you are looking for a partner to develop your medical device, you need to select an organisation that will give you confidence in their:

- Ability to deliver a robust, functioning design that maximises the benefits of your new concept.
- Knowledge of the latest technological developments and how to apply them to your idea.
- Understanding of the product ergonomics, application and user preferences.
- Knowledge of production processes and ability to deliver a design that can be manufactured cost-effectively.
- Being up-to-date with relevant regulatory requirements.

MET delivers all this, in confidence, and more!

We work closely with regulatory experts, materials experts, medical device design experts, production and validation experts. Our medical device development solutions result from an excellent combination of skills.

By working with our team, you will reduce your completion time scale. New device ideas are assessed using comprehensive test facilities and readily available medical consultants. Our engineers will apply their broad experience of project management gained with a wide variety of medical devices. We also implement a quality system that complies with both ISO 9001 & 13485 standards. The result: a proven production-ready product.

MET will get your project off to a flying start!
